

Series EKA: 1/2" Disc Thermostat

EKA series is a compact design, auto and manual thermostat for controlling or limiting temperature changes.

The switch mechanism is actuated by a snap-action bimetal disc, which opens and closes a set of electrical contacts when predetermined temperature is reached. The bimetal disc is electrically and thermally isolated from the switch.

Different mounting configurations are available for maximum design flexibility: surface mount, air-stream and duct mounts.

Used in boilers, heaters, vacuum cleaners, stoves, dryers, dishwashers and air conditioners.

Temperature range: -30C to 170C (-22F to 338F)

Contact rating: SPST contact with 16A@120/240VAC
